

Subtraction Word Problems

Directions Standards 10 PAGES

Best Way to Use this Packet

Directions:

Print this packet out leaving this page out of the packet, for each student. Read the word problem whole group. Model for students how to circle the numbers. I use both numerals and the written number throughout the packet. I also show students how to cross out "FLUFF". Students will draw the story out using pictures. how to use the number line to jump backwards and take away. Students will then color squares on the Ten Frame to show the problem. For example, if the problem is 3 frogs are in a pond, 2 jump off, color 3 squares red. Then have them put an "X" on the 2 squares showing them being "taken away." They can use any color. Next, they will use tally marks for the answer, write the equation and the difference.

- FLUFF = Information that is not needed to solve the problem
